WINESTIMATOR DONATES TO LOCAL HABITAT FOR HUMANITY

KENT, WA, SEPT. 22, 2009: WinEstimator, Inc., an award winning cost estimating software solution provider, has donated over \$35,000 in software and support services to the Seattle/South King County Habitat for Humanity.

WinEstimator donated WinEst Pro Plus estimating software, Modelogix cost modeling software, the WinEst Residential Database, electronic plan takeoff software, and the associated classroom training. WinEst Pro Plus will help Habitat for Humanity Seattle/South King County better estimate the cost of homes they build for those in need, helping to eliminate any cost overruns. WinEst Modelogix will help them conceptually estimate future projects so they can quickly see how to maximize their development budget in an effort to provide the community with even more homes for those in need.

Steve Watt, President and CEO of WinEstimator, Inc. stated, "We were happy to provide our software and support services to the local chapter of Habitat for Humanity. I'm convinced that our software will allow Habitat for Humanity to be more efficient when developing budgets and managing costs."

Tom Gaylord of Habitat for Humanity Seattle/South King County noted, "Our team has just started using the software and it has already increased our speed and efficiency. Our upcoming development project will be much more detailed and accurate than anything we have done to date. We are really looking forward to creating a historical database to help us with our projections."
